

Daniil Yuzepenko

Junior Go (Golang) Developer

Opole, Poland | +48 790 803 658 | georgiferstor@gmail.com | github.com/DaniilYuz

SUMMARY

Junior Go Developer and 3rd-year Computer Science student with hands-on commercial experience building gRPC and REST microservices in Go. Recently completed a Go Developer internship at EPAM Systems, designing a gRPC-based project-tracking microservice with PostgreSQL and Redis, and passed a technical assessment confirming production-level skills in Go, Docker, gRPC, PostgreSQL, and Redis. Strong foundation in REST APIs, JSON, microservices, SQL/NoSQL databases, and Clean Architecture, with practical DevOps experience (Docker, CI/CD, Nginx, VPS deployment). Eager to grow in high-performance, large-scale platform engineering.

TECHNICAL SKILLS

Languages: Go (Golang), Python, C#, JavaScript/TypeScript, C++, SQL

Go & Backend: REST API, gRPC, Protocol Buffers, grpc-gateway, Gin, GORM, JSON, WebSockets, Microservices, Clean Architecture, SOLID/DRY

Concurrency: Goroutines, Channels, Worker Pools, Semaphores, WaitGroups

Databases: PostgreSQL, Redis (caching, TTL), SQL, NoSQL fundamentals

Infrastructure & DevOps: Docker, Docker Compose, Nginx (reverse proxy), CI/CD (GitHub Actions), VPS deployment, TLS/SSL

Tools & Practices: Git, Clean Code, Code Reviews, Data Structures & Algorithms, Unit & Integration Testing

PROFESSIONAL EXPERIENCE

EPAM Systems — Go Developer Intern (Project: EPMT-SPGO) *(May 2026 – Jun 2026)*

- Designed and implemented a gRPC-based project-tracking microservice in Go, delivering full CRUD and List operations for Users, Issues, and Projects.
- Defined a language-agnostic API contract with Protocol Buffers and extended it via grpc-gateway to expose RESTful HTTP/JSON endpoints alongside gRPC.
- Implemented business logic including entity validation, issue lifecycle management, status transition rules, and conditional field requirements.
- Built a layered storage abstraction following SOLID and DRY principles, enabling interchangeable in-memory, PostgreSQL, and Redis-backed implementations.
- Integrated Redis as a caching layer with TTL support to reduce database load on read-heavy operations.
- Containerized the application and its dependencies (PostgreSQL, Redis) with Docker and Docker Compose, including persistent volume configuration for data durability.
- Validated and confirmed skills in Go, Docker, PostgreSQL, Redis, and gRPC during a technical final assessment.

Intechity — Software Engineering Intern *(Opole, Poland)*

- Developed and maintained back-end services using C# and Entity Framework Core.
- Wrote integration tests and worked with Repository and HTTP layers.
- Collaborated on front-end development using React.

SELECTED PROJECTS

Doodle Jump Motion Online — Full-Stack Developer & DevOps

- Developed a real-time multiplayer game with Mediapipe-based camera motion control.
- Implemented a matchmaking system and real-time communication via WebSockets.
- Built the full infrastructure: Dockerized the app, set up an Nginx reverse proxy, and configured CI/CD via GitHub Actions for VPS deployment.

JoyJoin (Event Management Multi-tool) — Backend & DevOps Developer

- Collaborated in a team of three to build a comprehensive event management platform.
- Architected the backend in Go with a focus on high concurrency, using Worker Pools and Semaphores to manage simultaneous user access.
- Handled the deployment and DevOps pipeline for the project.

EDUCATION

Opole University of Technology

Bachelor of Engineering in Computer Science (Expected 2027) — currently in 3rd year

LANGUAGES

Ukrainian: Native | Polish: Fluent | English: Upper-Intermediate (B2)
